DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 and 12-51 are rejected under 35 U.S.C. 102(b) as being anticipated by Dryden.

Dryden discloses in figures 1-8 a two-tube resuscitation system that anticipates an anti-snoring device comprising a flexible hollow tube 12, having an extraoral segment (the outer portion of 12), an intraoral segment (the portion of 12 inside of the user's mouth), an intermediate segment (the portion between the extraoral and intraoral segments), an adjustable a stop 21, the inner diameter of the stop is smaller than the outer diameter of the tube (forming a friction fit, col. 2, lines 31-33), the extraoral segment has an open end (where fitting 19 fits onto), the intraoral segment has an open end 48, the intraoral segment is angled (fig. 1), the opened end of the intraoral segment is angled (opening 48 is angled), the tube includes a bend (adjacent reference number 61), the intraoral segment has at least one ventilation opening 52, the intraoral segment has at least one opening (the open end provides an opening) and a method of using the device. The hollow tube and the stop include a non-latex material. The stop is a perform in the tube. Dryer further discloses and oxygen supply 38, comprising an outlet 41, connected to the extraoral segment, the tube includes a connector stem 18,

the oxygen supply is disposed in a surrounding relationship to the extraoral segment, the stop is slidable along the tube, an extension 29 on the outer perimeter of the tube, the extension is on the intraoral segment of the tube and a mask (col. 1, lines 25-26) that can be connected to the oxygen supply.

Allowable Subject Matter

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Linder, Blachly and Miller discloses a breathing enhancement device.
